European Center of Pharmaceutical Medicine

ADVANCED STUDIES

Course Description

This course provides the participants with an understanding of the key principles and methodological concepts of health economics. The role of health-economic thinking in the drug development process is addressed. Two group exercises will complement lectures and discussions.

Learning Outcomes

- Understand the fundamental concepts of health economics.
- Understand key principles of health economic evaluation.
- Be able to assess and appraise a published health economic analysis according to guidelines and checklists.
- Understand the importance of health economic/pharmacoeconomic methods and concepts for the drug development process, clinical trials, and post-marketing surveillance.
- Understand how policy makers set priorities in health care and how health economic evaluations support this process
- Understand the importance of health technology assessment in different health care systems.
- Understand rational choice and priority setting using economic evaluation.

Target Audience

All pharmaceutical and health care professionals who are interested to get a fundamental understanding of health economics and health economic evaluations in the context of drug development.

Program

The program includes theoretical background sessions and is enriched with exercises and in-group exercises
